Project Proposal

- **Introduction**

- FAST Connect is a Smart University Management and Assistance System. This system is intended to make the life of students and staff enjoyable on the campus. This system is designed in a manner to provide several important functionalities under one umbrella. Some of these include the timetable, classroom details, complaint registration, maintenance requests, announcements, events, and campus navigation. With FAST Connect, communication becomes smoother and efficient. Problems on campus can be handled effectively.

- **Existing System**

- There are different systems that are used separately for the maintenance of students records, scheduling of classes, handling of complaints, issuing of announcements and providing of campus services. These systems are too hard to use and makes it difficult for students to utilize different services using one system. FAST Connect will integrate these services under one easy system.

- **Problem Statement**

- Currently students need to access several platforms according to their university requirements like announcements might be posted on GCR, communication and class schedules through Gmail, and university website for other information. It becomes hard for the students to deal with all this information. FAST Connect will offer all these services in one platform.

- **Proposed Solution**

The FAST Connect application will include various university functions into a single platform where students can view announcements, timetable, university information, complaints, and events. There will be other features such as campus navigation, emergency report, smart search, and maintenance request.

- **Salient Features**

- Student Login
- Time Table and Class Schedule
- University Announcements and Admin Dashboard
- Classroom and Laboratory Information
- Campus Navigation
- Complaints and Emergency Reporting
- Maintenance Requests
- Events and Societies Information
- Lost and Found
- Smart Search
- Manage Students and Classrooms
- Statistics and Reports

- **Tools & Technologies**
- Programming Language: C / C++
- Framework: None
- Operating System: Windows
- Development Tools: VS Code and Dev-C++
